2 - HOW TO INSTALL

CHOOSE A WELL-VENTILATED PLACE
Provide at least 6 inches (15cms) above, 6 inches (15cms) on both sides and 6 inches (15cms) at the back, to ensure air circulation.

AVOID EXTREME HEAT AND COLD
Place your refrigerator away from direct sunlight and heat sources such as radiators or cooking ranges and also from direct air drafts, i.e. windows, fans etc.

PLACE ON A FIRM, LEVEL FLOOR
Your refrigerator should be made to stand on a firm, level floor. If the floor level requires adjustment, suitable packing will have to be used.
Please note that no stand must be used with the refrigerator. It should directly rest on the floor.

USE THE PROPER VOLTAGE & ELECTRICAL WIRING
Your refrigerator operates on AC 220 V, 50 Hz power supply. A voltage stabiliser is advisable if there is wide fluctuation in voltage supply.
Connect the plug to a 3 pin, 5 amps socket.
Ensure that the wall socket is properly earthed by having it checked by a qualified electrician. It is safe to use a socket with a fuse and a switch, at about 1.4 metres from the floor.

KEEP IT CLOSE TO THE OUTLET
Place your refrigerator close to the electrical outlet. Do not use an extension cord. The wires should be kept off the floor, for if water drips onto the floor, a short circuit may be caused.
3 - FIRST STEPS

1. Plug the appliance cord into the wall outlet and switch on the supply.

2. Check if the light glows on opening the lower door of the refrigerator.

3. Turn the TEMPERATURE CONTROL* to Max Level and leave the refrigerator on for about 24 hours. The refrigerator will operate continuously at this setting.
   **Note:** Compressor will START three minutes after switching on.
   a. For SD, ZD & AURA Series switch to Turbo Chill Mode
   b. For S Series, switch to Max Level & Colder

4. Adjust the temperature controls according to the desired level of cooling after 24 hrs.

5. If your refrigerator is switched off for more than 8 hours, repeat steps 1 to 4 before using your refrigerator.

*In select models only.
4 - KNOW YOUR REFRIGERATOR

A. FREEZER COMPARTMENT

Is used to make ice and store ice, ice cream and other frozen desserts. Also used to store meats, poultry, fish, fruit pulp and other frozen foods for extended periods.

- The twist & serve design allows you to collect the ice formed in the ice server below, by just twisting the Ice Tray Lever.
- The ice server can be used for storing ice cubes while the ice trays become available for making more cubes. However, please do not use it for making ice. Ice expands with cooling, so it may lead to cracking of the ice server.
- It is advisable to consume the ice cubes as soon as possible after it is collected in the server, before dispensing again.

FREEZER BOX
The freezer has a box to accommodate small items that need to be frozen.

FREEZER BIN
The freezer has a big bin to accommodate big items that need to be frozen.
(Max allowable load in Freezer bin : 15 Kg)

FLEXI FREEZE*
Innovative storage feature for space management—the storage space expands vertically by sliding the outer tray.

FREEZER LIGHT
LED lights provided for better visibility. It lights up once the freezer drawer is opened.

*In select models only.
B. REFRIGERATOR (LOWER) COMPARTMENT

FRUIT TRAY*
- A separate storage space is provided in the form of a tray, which is suitable for storing fruits.

FOLDABLE WINE RACK*
- Foldable storage space has been provided for bottles. Uniquely designed wine rack is provided which enables customers to store bottles whenever required or fold back the feature to provide storage below the rack.

CRISPER
- The refrigerator comes with a large vegetable tray with a recessed handle for ease of use. The vegetable tray also comes with a humidity control slider that allows you to regulate the inflow of air, keeping vegetables fresh for a longer time.
- Please use the handle to pull the tray. It is very convenient and the tray will slide out easily. For relocating the tray, it is better to give a gentle push to the tray in the centre. Do not use the handle for sliding in. Centre push is easier and will ensure proper relocating of tray.

CRISPER INNER TRAY
- A special inner tray is provided in the Crisper for soft vegetables like tomato, lemons etc. and for frequently used vegetables.

ADJUSTABLE STORAGE SHELVES
- The refrigerator has multiple grooves so you can adjust the position of shelves to suit your needs. They should be pushed to the back. To remove shelf (for cleaning) lift it from rear side & then pull out gently.

INVERTER COMPRESSOR*
- An inverter compressor runs at different speed according to the load required by the fridge, resulting in higher efficiency and power saving.

*In select models only.
REED SWITCH BASED DOOR SENSING*
• This is an electro-magnetic Switch which operates Lights in Fridge. This feature includes high sensitivity, design flexibility & reliable performance in different operating conditions. The reed switch is not visible to human eye, thus adding value to aesthetics.

JUST THE RIGHT TEMPERATURE* Technology
• Each zone has been calibrated for a temperature range to suit different types of food i.e. Chiller, Fridge and Pantry Zones. (Refer Controls page)

TOWER LED LIGHTS
• The LED light panel located at the back of the refrigerator compartment ensures very good illumination in the entire refrigerator storage space.

AROMA LOCK
• Special palladium based deodorizer removes foul odours and destroys ethylene gas released by some ripening fruits and vegetables. This helps to slow down the decay of the stored food and ensures freshness for a longer time. It may be laced in the vegetable tray or fruit tray.

AIR FLOW CONSOLE
• The Air Flow Console ensures intelligent circulation of cool air throughout the refrigerator. This gives all food uniform cooling where ever it is stored in the refrigerator (on all the shelves). As a result, food stays fresher for a longer time.

DOOR ALARM
• If any of the doors is left open for more than 90 seconds, the alarm system will inform the user by a beeping sound.

INTERNAL LIGHTING
• When door is opened the capsense panel and tower LED light i.e. LED panel lits up to illuminate the entire compartment.
When door is closed, capsense panel and LGP panel gets switched off to save energy.
C. DOOR PANEL

The Innovative Door Panel gives you versatility of storage and provides full utilisation of precious space. It offers you:

- Egg Tray
- Removable Door bins- can be carried to the cooking/dining area for convenience
- Extra deep bottle racks which can accommodate big 2.5l bottles. Bottle Snugger to hold the bottles in place and prevent them from shifting.
- Dairy Box
  A special box with lid is provided to store dairy products like cheese, butter, medicines etc.
CONTROLS

S SERIES

TEMPERATURE SETTING
This Temperature Setting knob is to be used to control the temperature. Clockwise rotation will increase cooling and anti-clockwise will decrease cooling.

AIR FLOW CONTROL SETTING
Airflow Setting knob is to be used to set the flow of cold air to the main compartment and can be used to set damper valve opening, so that air flow can be controlled. Clockwise rotation will increase opening and anti-clockwise will decrease opening and hence the cold air flows into the main compartment.

SD & AURA SERIES

Control keys on the door display are feather-touch enabled. The user can touch the keys to adjust the desired settings.
PRESS MENU TO ACCESS THE LIST OF FEATURES
Up/Down keys are used to move up or down in display list. To access the cooling level menu, press MENU Key when cursor is on COOLING LEVEL.

To change cooling level, press up/down keys to achieve desired level.

Pressing the Menu key would confirm the selection.

Set level will be displayed as shown; if level 4, then 4 bars should be white. Also corresponding text should be displayed below bar graph

- NORMAL (for level 3, 4 & 5)
- Display for Level 4
- MIN (for level 1 & 2 and)
- Display for Level 1
- MAX (for level 6 & 7)
- Display for Level 7

Press Menu to go in list of features Up/Down keys are used to move up or down in display list. To access Turbo Chill Mode, press Menu Key when cursor is on Turbo Chill.

Up/Down keys are used to move to Y or N. Pressing the Menu Key would confirm the selection Y (YES) or N (NO). When Turbo Chill Mode is ON only *icon should be displayed. During Turbo Chill, compressor will run continuously for fixed time, when it

*In select models only.
comes out of this mode it will take the previous settings and display accordingly. In order to extend turbo chill time further, user will need to turn off the turbo chill mode (if its 'on') and then select it again.

Door alarm mute key:
When the door is open for more then 90 sec there will be an alarm sound to warn the user. This sound can be muted by pressing ‘DOWN’ Key.
To access Child Lock mode, press Menu Key when cursor is on Child Lock. Up/Down keys are used to move to Y or N. Pressing the Menu Key would confirm the selection Y (YES). Set level will be displayed as shown – if level 4 – then 4 bars should be white. Lock symbol will be displayed when Child Lock is turned ON. In order to unlock, ‘UP’ key is to be pressed for 5 sec continuously. If Child Lock is enabled and ‘door open alarm’ condition appears, press the Down key to deactivate Door Alarm.

To access Holiday Mode, press Menu Key when cursor is on Holiday.
Up/Down keys are used to move to Y or N. Menu Key is used to confirm the selection. Set level will be displayed as shown – if level 4 – then 4 bars should be white. Only airplane symbol should be displayed if Holiday Mode is turned ON. When the refrigerator exits the Holiday Mode, it returns to the Last Set Cooling Level.
Remember for S, SD & AURA Series:

The thermostat/cooling level and cold air settings should be selected on the basis of:
1. Total load in refrigerator and freezer compartments.
2. Temperature of the surroundings (ambient temperature).
3. Frequency of door openings.
4. Distribution of load between the two compartments.

**SETTINGS FOR YOUR REFRIGERATOR**

<table>
<thead>
<tr>
<th>More load in refrigerator compartment</th>
<th>Ref Max. &amp; Cold</th>
<th>Ref Max. &amp; Coldest/Level 7</th>
</tr>
</thead>
<tbody>
<tr>
<td>More load in freezer compartment</td>
<td>Freezer Max. &amp; Cold/Level 1</td>
<td>Freezer Max. &amp; Coldest</td>
</tr>
<tr>
<td>TOTAL LOAD</td>
<td>LOW</td>
<td>HIGH</td>
</tr>
</tbody>
</table>

**FOR EXAMPLE**
1. If you want to quickly freeze items (e.g. making ice cubes or preparing ice creams), you may use setting Freezer Max. & Coldest / Level 7*
2. If you want to cool items in refrigerator compartment (e.g. custards or jelly) you may use setting Ref. Max. & Coldest / Level 7*
3. Whenever you change the setting for such special requirements, you should revert to the normal setting once your requirements are satisfied. When ambient temperature increases (e.g. during summer months) you may move the temperature control towards colder setting and cold air control towards Ref. Max.

*In select models only.
LCD TOUCH SCREEN DOOR DISPLAY CONTROL:

Home screen will display the room temperature

Just The Right Temperature (JTRT) Technology: Zonal Temperature Setting
There are four zones, whose temperature can be customised according to user's needs. This feature is called as “Just The Right Temperature technology”. The cooling level can be set/changed by selecting “Zones” icon from the Home screen. There are three setting options viz. Pantry, Fridge & Chiller. These can be selected for a zone using left (<) & right (>) arrow keys. To confirm setting, touch the selected zone.

Chiller is the coldest zone in the main compartment and is suited for storing food items like milk, yoghurt, paneer, tofu, beverages for quick chilling, fresh meat etc. Fridge is less colder than chiller and is suited for storing food items like desserts, cooked dishes like curries, rice, pasta, chutneys, etc. Pantry is less colder than the fridge and is suited for storing food items like breads, salads, raw vegetables, batter, dry fruits, fruits etc.

Zone settings can also be operated using the Capsense Panel control located inside main compartment on the left wall. The panel adjacent to the storage zone can be used to set the Zone settings. The selected zone button on the Capsense panel will omit a blue glowing light.
Guidelines for cooling level selection:

For most efficient operation & best use of refrigerator storage, the following points should be considered.
- Upper zones should be set at Pantry or Fridge
- Setting sequence for all the zones should be such that Pantry, Fridge or Chiller are in adjacent zones. That is, do not set same level in alternating zones e.g. Pantry, Fridge, Pantry, Fridge. It is recommended that this be Pantry, Pantry, Fridge, Fridge.

Refer following table for some of the possible combinations.

<table>
<thead>

There are 36 temperature combinations which are possible. Above mentioned settings are unique requirement of the customer for storing food. In normal usage customer to keep combinations as “FRIDGE, FRIDGE, FRIDGE, FRIDGE”

Note: Crisper/Vegetable Tray temperature is likely to become colder if any of the zones is set as “Chiller”.

ZONE 1
ZONE 2
ZONE 3
ZONE 4
CRISPER
FREEZER

*Illustrative representation for reference purpose only.
Quick Freeze Setting:

This feature can be set by selecting “Quick Freeze” icon from the Home screen. To activate this feature, press “ON”. When Quick Freeze is activated, the compressor & fan will be ON for four hours. After four hours, Cooling levels will be automatically set to the last setting. To terminate the feature before said time, press “OFF” on “Quick Freeze” screen.

This feature is to allow the user to quickly cool the freezer compartment. This is likely to temporarily affect the cooling of zones in the main compartment, except Chiller Zone.

Turbo Chill Setting:

This feature can be set by selecting “Turbo Chill” icon from the Home screen. To activate this feature, press “ON”. When Turbo Chill is activated, the compressor & fan will be ON for two hours. After two hours, Cooling levels will be automatically set to the last setting. To terminate the feature before said time, press “OFF” on the “Turbo Chill” screen.

Turbo Chill is a function used to quickly chill the refrigerator compartment. User has to set atleast one of the zones to Chiller, to run this feature.

Quick Freeze & Turbo Chill will not run simultaneously, only one of the two can be active at a time. If Turbo Chill and Quick Freeze are activated, Quick Freeze will override Turbo Chill.
Holiday Setting:

This feature can be set by selecting “Holiday” icon from the Home screen. To activate this feature, press “ON”. In Holiday Mode, all Zones will set to “Fridge” & Zone 4 will be set to “Pantry”. It will get deactivated once any of the doors are opened. To terminate the feature manually, press “OFF”.

This is recommended when the user is away for a few days. If any of the doors are not opened for 60hrs, then it will enter automatically in Holiday mode.

Timer Setting

This feature can be activated by selecting “Timer” icon from the Home screen. It is a countdown timer. Once set by user for specified time duration, it will start a count down & will set off an alarm, once count is elapsed. This feature can be used to alert the user after a pre-set timing.

Select “Set Timer”, to set the time.
The time can be set by using Up & Down keys.

User can stop the countdown timer, by touching “Stop” key. The Home screen will show the remaining time, in place of Godrej Logo that is normally seen. Once time is 00 then buzzer will sound for 1 min. The timer display on home screen will remain until the buzzer sound has stopped or will exit from timer mode if the user touches the screen.

**Setting:**
There are three features in the setting option: Door Alarm, Power Save and Screen Lock.
To use these, select “Setting” from Home screen.
a. Door Alarm:
This feature can be operated by selecting “Door Alarm” from the “Setting” icon on screen. Door alarm can be set ON/OFF by touching the appropriate key. When ON, if any door is open, Door alarm will be activated after some time. It will also display visual indication for an open door, apart from a beeping sound.

It is normally recommended to, keep the “DOOR ALARM” in “ON” mode.

b. Power Save:
This feature can be operated by selecting “Power Save” from the “Setting” screen. Power Save can be set ON/OFF by touching appropriate key. This will optimize the power consumption of refrigerator. All zones will be set to Optimum Temperatures. Other functions like Holiday/Quick Freeze/Turbo chill mode will be deactivated. After making Power save feature OFF the refrigerator will go back to previous setting. The Door display will be in standby in case the user does not interact with it for some time.

c. Screen Lock:
This feature can be operated by selecting “Screen Lock” from the “Setting” screen. Screen Lock can be set ON/OFF by touching the appropriate key.

Once activated it allows the user to set a security password. By default, password will be 999.
Once the Screen lock is activated, no changes would be possible unless the correct password is entered.
5 - FULLY AUTOMATIC DEFROSTING

You never have to defrost either compartment since your refrigerator is designed to defrost itself completely and automatically.
The cyclic defrost system ensures that the refrigerator defrosts itself regularly, by a "defrost heater" during the "defrost cycle". During this cycle, the compressor is off for sometime, after which it restarts.
Defrost water drains into the water evaporation pan which sits near the compressor, through the drain pipe. From there, it evaporates automatically.

OVERFLOW OF WATER FROM EVAPORATION PAN:
Clean the water evaporation area periodically.

6 - BEFORE CALLING FOR SERVICE

If your refrigerator is not working properly, check the following before you call for service assistance.
1. Power plug is connected properly.
2. Fuse is intact and power supply is normal.
3. Control is set correctly.

Note: On opening the door, you may find water droplets on the inner surface. This is normal condensation process and not a defect.

Note: Please do not keep the Freezer drawer open for long time as condensation may affect Smooth operation of the drawer. Please note that it is not a defect but a natural phenomenon of condensation and freezing on very cold surfaces.
7 - USEFUL SUGGESTIONS FOR FOOD STORAGE

- It is important that all food should be fresh before freezing or refrigeration, as food can be preserved, not rejuvenated.
- If frozen foods are bought and stored in the freezer after thawing, they are not safe for freezing.
- It is better to freeze meats in bigger pieces. So mincing the meat in advance should be avoided.
- All frozen food should be either packed in containers or wrapped in polyethylene or aluminum foil.
- Bread, cake and pastries should be kept properly wrapped or in containers.
- Butter, margarine and other fats can be stored in their original wrappings and in covered containers if in use.
- Loosely wrap all vegetables, especially the leafy ones in polythene bags.
- Fruit and vegetables that have a strong odour should be wrapped tightly.
- Certain vegetables like fresh beans and lady finger should not be washed before storing.
- Mushrooms, melons and peaches can only be chilled in the refrigerator and not preserved.
- If fruits and vegetables are washed before storing, they should be thoroughly drained of all the water. Excess moisture can increase the possibility of spoilage or decay.
- Avoid keeping vegetables right in front of the air-vent of the cold air flow console as it may lead to spoilage.
- Hot food should not be stored in the refrigerator, it should be cooled to room temperatures. Hot food increases the temperature inside the refrigerator and causes unnecessary condensation which can spoil other food.
- Ginger, garlic and red chilly paste can be made and stored in the freezer for 15-20 days. Chutneys can be kept in the freezer for 3-4 days.
- Ice cream should always be stored in the freezer. The cold air control must be kept at the coldest setting (freezer max) for storing ice cream. Ice cream may still stay slightly soft. This is bound to happen as normally ice cream is stored by retailers in deep freezers which maintain much lower temperatures.
- Bottles containing water and other liquids should be kept tightly closed at the caps. Wipe off all moisture before storing.
- Unopened canned food need not be stored in the refrigerator.
8 - CLEANING YOUR REFRIGERATOR

Complete defrosting and cleaning once a month is advisable. To do this, switch off the refrigerator and disconnect the plug from the wall socket.

- Empty the refrigerator by removing all food, ice trays, shelves and vegetable tray.
- Then take a piece of clean cloth, dip into a mild soap solution and wipe the refrigerator gently.
- Water should not get into the light guide panel and other electrical components. Always ensure that the refrigerator is dry before you restart it.
- To clean the exteriors, wipe with a cloth moistened with warm soapy water. Wipe dry.
- Keep the surroundings clean and insect free. Do not spray any insecticides inside the refrigerator as it is harmful and toxic, also the chemicals react with the plastic surfaces and damage them.
- It is important to keep the exteriors of the refrigerator dry to avoid rusting, especially the lower front edge of the cabinet as well as the bottom surfaces of the door.

9 - MOVING OUT/SHIFTING

GOING ON VACATION
If you are away for less than a week, there is no need to switch off the refrigerator. You can set it on 'Holiday Mode'. If you are taking a long break, switch off the power supply, remove the plug and remove all the food stuff. Defrost and clean the refrigerator. Leave the door slightly open to prevent smell. It is advisable to place a thick towel over the door so that it does not shut.

MOVING HOUSE
If you are moving house, it is essential that a Godrej service representative or an authorised dealer inspects the refrigerator at the time of re-installation at the new address. This is essential for the continuation of the warranty of the product/optional service contract for the sealed system of the refrigerator. We would also recommend that the product be insured against damage in transit. The warranty on the product/service contract continues to be effective only if the product is found to be in working condition at the time of re-installation by the representative of Godrej or its authorised dealer at the destination town.
10 - SAFETY PRECAUTIONS

WARNING:
When using this refrigerator, always exercise basic safety precautions, including the following:

- Locate, install and use the refrigerator properly in accordance with the instructions given in this user guide.
- Never unplug your refrigerator by pulling the power cord. Always grip the plug firmly and pull straight out from the wall socket after switching off the supply.
- Repair or replace immediately all electric service cords that have become frayed or otherwise damaged. Do not use a cord that shows cracks or damage by abrasion, rodents etc.
- Do not keep anything on top of the refrigerator – such as lit candles, temples, cloth covers, electrical appliances like TV/ Lamp etc.
- Do not splash water on or in the vicinity of the refrigerator. It could cause an electrical leak or malfunction.
- The ventilation grilles should not be obstructed. Always ensure that there is good ventilation and that the outward flowing air is able to escape.
- Young children should be supervised to ensure they do not play with the appliance. They could damage the refrigerator or hurt themselves. It could also disturb the stability of the refrigerator.
- After your refrigerator is in operation, do not touch the cold surfaces in the freezer compartment, particularly when hands are damp or wet. Skin may adhere to these extremely cold surfaces and get hurt.
- Don’t refreeze frozen foods which have thawed completely or partially. Eating such refrozen foods could harm your health.
- Unplug your refrigerator before cleaning and making repairs. We strongly recommend that any servicing be performed by a qualified technician.
- Do not store flammable sprays, vapour or liquids like gasoline, laquer and paint, volatile chemicals like benzene or ether, evaporating liquids like perfumes, nailpolish removers, etc. inside the refrigerator. It may damage the food and some of these could also cause an explosion. Avoid storing these near the refrigerator as well
- Do not use lubricants (lubricating oils, sprays, kerosene, WD-40 etc.) on the hinges of the refrigerator doors. Some lubricants chemically react with plastics resulting in damage to doors
- Refrigerator contains refrigerant and insulation contains gases, which must be disposed of professionally, to avoid any safety hazards.
- Do not store bottles in the freezer compartment.
11 - ENVIRONMENT FRIENDLY SUGGESTIONS

DISPOSAL OF PACKING MATERIAL

After installing the refrigerator, recycle/reuse the corrugated box, fitments and polythene cover/straps. Do not dispose them off as garbage. This helps to conserve natural resources and prevents pollution.

ENERGY CONSERVATION TIPS FOR REFRIGERATOR USE

You can help save limited natural resources i.e. oil and coal by saving electricity. Simply follow these guidelines -

1. Never place hot food inside the refrigerator. Allow it to first cool to the natural ambient temperature. Hot food kept in the refrigerator increases the inner temperature thereby consuming more electricity. It also causes unnecessary condensation which can spoil other food.

2. Avoid door openings that are unnecessary or for long durations (say more than 30 seconds) as the air inside the refrigerator gets warm. This requires extra running time for the refrigerator resulting in more electricity consumption.

3. Ensure that the refrigerator door is closed properly.

4. During installation of the refrigerator, ensure that the minimum clearance between the refrigerator and the walls are maintained as per the 'Installation Instruction' given in this User Guide. This is required for efficient functioning of the condenser and in turn the refrigerator.

5. Avoid exposing the refrigerator to extreme heat by placing it away from direct sunlight and heat sources such as radiators or cooking ranges etc. as this adds extra load on the refrigerator and leads to an increase in power consumption.

6. If you are going away for long periods (say more than a week) on a vacation etc., switch the refrigerator off so that there is no wastage of power. When the refrigerator is switched off, clean the refrigerator as recommended.

7. Set the temperature control and the cold air control judiciously for optimum performance as well as minimum power consumption. When the temperature control knob in the refrigerator section is set on 1 and the cold air control in the freezer is set on Ref. Max., the power consumption is the least. At the peak setting, when the temperature control is on 7 and the cold air control setting is on Freezer Max., the power consumption is the highest.

Protection of Environment:

“Protection of environment” is one of the core values of Godrej and we seek your co-operation to make sure that this product is not disposed as unsorted municipal waste, as it contains hazardous substances like Lead, Mercury, Cadmium, Chromium, Polybrominated Biphenyls & Diphenyl ethers which can pollute environment and may lead to health hazards for human beings.

This symbol is known as the “Crossed-out Wheelie Bin Symbol”. It means that the product should not be disposed of with your general house-hold waste.

It should be disposed of only through the company’s collection centers with special treatment so as to prevent any damage to the environment. Please call: 1800 208 5511 or visit www.godrejappliances.com/green-think for details about Godrej Appliances authorised collection centers.
12 - WARRANTY

The Godrej Frost-free Refrigerator comes with a TEN years warranty on COMPRESSOR and a ONE year warranty on all other parts (except bulb, glass and add-on plastic parts) from the date of purchase, against defective material or workmanship. In case of any such defect found during the first year from date of purchase, Godrej & Boyce Mfg. Co. Ltd. - Appliance Division will undertake repairs to the warranted part free of charge, subject to the terms and conditions below. In the warranty period beyond the first year from date of purchase, only the compressor will be provided free of cost. However, the appliance will be repaired on payment of necessary charges.

INSTRUCTIONS FOR THE CUSTOMER
1. Kindly ensure that the dealer fills the warranty card correctly and completely.
2. You should retain the warranty card for record and production of the same in the event of any warranty repairs.
3. In the event of a defect developing in the product, contact the nearest authorised Godrej & Boyce Service Centre for obtaining warranty service and provide the defect, model details & serial no.
4. Earthing of the appliance is necessary to ensure safety.
5. Product will function between +/-5% of the rated voltage. For any fluctuation beyond the specified limit, company shall not be responsible and the warranty stands terminated.
6. Frequency must be between 5% variation of 50 Hz. Beyond this, the company shall not be liable for any unforeseen hazards like fire, shock etc. and in turn, the warranty stands terminated.
7. The product must be maintained to ensure hygiene. If there are any insects, rodents etc. in it, obstructing the functioning of the product, the company shall not be responsible and in turn, the warranty stands terminated.
8. If you are moving house, it is essential that a Godrej service representative inspects the refrigerator at the time of reinstallation at the new address. The warranty on the product/optional service contract for the sealed system of the refrigerator continues to be effective only if the product is found to be in working condition. The reinspection will be done on the payment of necessary charges. We would also recommend that the product be insured against damage in transit.
9. Please follow the guidelines given regarding refrigerator and music player usage.

TERMS AND CONDITIONS
1. Repair and replacement of parts will be carried out through the authorised Customer Service Centre.
2. All transportation and handling expenses incurred while repairing will be payable by the customer.
3. For any appliance installed beyond the municipal limits of the jurisdiction of the authorised customer service centre, charges towards technician’s visit will be borne by the customer.
4. While the company will make every effort to carry out the repairs at the earliest, it however is made expressly clear that the company is under no obligation to do so in a specified period of time.
5. The company/its authorised personnel will collect any parts, compressor or other components replaced.
6. Warranty does not cover accessories to the appliance.
7. Sealed system gas charging and consumables will be charged for any such repairs after one year from the date of purchase.
8. While the company will take all necessary steps to repair the appliances supplied under the warranty and keep sufficient stock of the spare parts of the appliance with them, however, in certain cases where the appliance can not be repaired due to non availability of the spare parts, the company, at its sole discretion, may offer a replacement of the appliance to the purchaser of such an appliance, under a replacement offer. The replacement offer is subject to change from year to year and any discount given shall be applicable on the MRP of the product to be purchased as a replacement. A table giving the details of the replacement offer is available on www.godrejsmartcare.com

Customer’s Signature:

This warranty is valid only if it is filled in and stamped by our authorised dealer on the date of purchase.
Warranty for the music player stands null and void in the following cases:
1. Water or other such liquids, foreign particles etc. seep into the music player components resulting in malfunctioning of the sound system or any other component of the music player.
2. Foreign particles accumulate in the USB port or USB port gets rusty.
3. Keypad sticker tears off due to excessive pressure exerted during operation, resulting in switch/product malfunction.

Overall warranty stands null and void if
1. The warranty card is not completed properly at the time of the purchase. 2. The completed warranty card is not presented to the authorised personnel at the time of service of the product. 3. The refrigerator is not operated according to instructions given in the User’s Guide. Defects are caused by improper use, which shall be determined by the company personnel. 5. Unauthorised persons carry out any repair work. 6. Defects are caused by reasons beyond control, like abnormal voltage, acts of God, or while in transit to service center or purchaser’s residence. 7. The serial number is deleted, defaced or altered. 8. Damage is caused to the refrigerator or any parts due to transportation or shifting.
Warranty automatically expires after the stipulated period from the original date of purchase, even if the refrigerator was not in use for any time for whatever reasons.
